

MOHIT JADHAV

Entry-Level AI & Data Science Professional | Python, Machine Learning, Generative AI & NLP

Bengaluru, Karnataka | +91 82175 55473 | rajemohit330@gmail.com | [linkedin](#) | [github](#)

SUMMARY

2026 B.E. graduate in Artificial Intelligence and Data Science, early in my career and looking to build a foundation in applied AI and Data Science within a structured, enterprise environment. Backed by nine independently built and deployed end-to-end projects spanning Machine Learning (classification, regression, recommendation systems), Generative AI (RAG pipelines with LangChain and FAISS, LLM integration, prompt engineering), and Computer Vision (transfer learning with EfficientNetB0 and MobileNetV2). Comfortable with Python, SQL, and libraries including Pandas, NumPy, and Scikit-learn, with experience taking projects from research through to production deployment and troubleshooting real-world issues along the way. Gained additional exposure to data cleaning, statistical analysis, and cross-functional collaboration during a Data Science internship. A fast, independent learner who has consistently picked up new frameworks and tools without formal training, and genuinely motivated to grow into a strong, well-rounded Data Scientist over time.

SKILLS

Programming: Python, SQL

Data Analysis: Pandas, NumPy, Scikit-learn, Data Collection, Preprocessing & EDA

Machine Learning: Classification, Regression, Recommendation Systems, Model Training & Evaluation

LLMs & Prompt Engineering: LangChain, RAG (FAISS, HuggingFace Embeddings), Groq API, Prompt Design, Conversational AI

Computer Vision & Deep Learning: TensorFlow/Keras, Transfer Learning (EfficientNetB0, MobileNetV2), Image Classification

Web & Deployment: Flask, REST APIs, Render, Gunicorn

Core Strengths: Problem-Solving, Independent Research, Curiosity, Working Independently & in a Team

Tools: Git/GitHub, Jupyter Notebook, Google Colab, VS Code

INTERNSHIP

Data Science Intern, Dyashin Technosoft Pvt. Ltd.

February 2026 - May 2026

- Collected, cleaned, and analyzed workforce demand data, performing EDA and feature engineering to develop, train, and evaluate a forecasting model that improved project resource planning.
- Wrote SQL queries to extract and manipulate data from databases, and used Python (Pandas, NumPy) for preprocessing and predictive analysis, ensuring data accuracy and integrity throughout.
- Built reports and visual summaries of findings, documented methodologies for future reference, and collaborated with cross-functional teams to align analysis with business requirements.

PROJECTS

SmartClaim AI

Python, Generative AI, RAG, LangChain, Groq, FAISS, Flask

GitHub: github.com/Mohit01112/SmartClaim-AI

- Built an AI-powered insurance claim verification system using a RAG pipeline (LangChain, FAISS, HuggingFace embeddings) and Groq LLM to automate claim eligibility decisions with detailed, explainable reports.

Cancer Risk Prediction System

Python, XGBoost, Flask

GitHub: github.com/Mohit01112/Cancer-Risk-Prediction-System

- Developed an ML-based system using XGBoost to classify patient cancer risk as Low, Medium, or High from health, lifestyle, genetic, dietary, and environmental factors, with confidence scores for each prediction.

Elephant Species Classification

Python, TensorFlow/Keras, MobileNetV2, Flask

GitHub: github.com/Mohit01112/elephant-species-classification

Live Demo: elephant-species-classification.onrender.com

- Built an image classification web app to distinguish African vs. Asian elephants using a fine-tuned MobileNetV2 CNN with transfer learning, returning predictions with confidence scores in real time.

Movie Recommendation System

Python, Flask, Scikit-learn, TMDB API, Render

GitHub: github.com/Mohit01112/movie-recommendation-system

Live Demo: movie-recommendation-system-r3e5.onrender.com

- Built a content-based recommendation engine with real-time TMDB API integration, deployed as a production Flask service on Render.

EDUCATION

B.E. in Artificial Intelligence and Data Science

Graduation: 2026

East Point College of Engineering and Technology, Bengaluru, Karnataka | CGPA: 8.02

EXTRACURRICULAR ACTIVITIES AND ACHIEVEMENTS

- Semi-Finalist, ET-AI Hackathon 2026, for developing the AI-based learning platform “FocusFlow AI.”
- 2nd Prize, VIBRATIONS Technical Event, East Point College of Engineering and Technology, for presenting an AI-based Personal Finance Management System.
- Participant, 24-Hour Innovation Hackathon, SJB Institute of Technology.
- Participant, XIGNITE Startup Competition, East Point College of Engineering and Technology.

CERTIFICATES

- Data Visualization: Empowering Business with Effective Insights, Forage
- GenAI Powered Data Analytics Job Simulation, Forage
- Basics of EDA with Python, Great Learning
- R Programming for Beginners, Great Learning
- Complete Data Science, Machine Learning, Deep Learning & NLP Bootcamp, Udemy
